DETAILED ACTION

1. Claims 1 to 57 are presented for examination.

Double Patenting

2. A rejection based on double patenting of the "same invention" type finds its support in the language of 35 U.S.C. 101 which states that "whoever invents or discovers any new and useful process ... may obtain a patent therefor ..." (Emphasis added). Thus, the term "same invention," in this context, means an invention drawn to identical subject matter. See *Miller v. Eagle Mfg. Co.*, 151 U.S. 186 (1894); *In re Ockert*, 245 F.2d 467, 114 USPQ 330 (CCPA 1957); and *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970).

A statutory type (35 U.S.C. 101) double patenting rejection can be overcome by canceling or amending the conflicting claims so they are no longer coextensive in scope. The filing of a terminal disclaimer cannot overcome a double patenting rejection based upon 35 U.S.C. 101.

3. Claims 1 to 45 are rejected under 35 U.S.C. 101 as claiming the same invention as that of claims 1 to 45 of prior U.S. Patent No. 6,996,763.

4. Claims 1 to 45 are directed to the same invention as that of claims 1 to 45 of commonly assigned US Patent No. 6,996,763. The issue of priority under 35 U.S.C. 102(g) and possibly 35 U.S.C. 102(f) of this single invention must be resolved.

Since the U.S. Patent and Trademark Office normally will not institute an interference between applications or a patent and an application of common ownership (see MPEP Chapter 2300), the assignee is required to state which entity is the prior inventor of the conflicting subject matter. A terminal disclaimer has no effect in this situation since the basis for refusing more than one patent is priority of invention under 35 U.S.C. 102(f) or (g) and not an extension of monopoly.

Failure to comply with this requirement will result in a holding of abandonment of this application.

This is a double patenting rejection.

Allowable Subject Matter

5. Claims 46 to 57 are allowed.

The following is a statement of reasons for the indication of allowable subject matter: the instant invention is directed to a method of encoding acknowledgement cannel in wireless communication systems wherein the absences of acknowledgement (ACK) signals or the absence of negative acknowledgement (NAK) signals are use to indicate the quality of the received data frame as either good for ACK or bad for NAK. The prior art made of record teaches various methodologies of acknowledgement for wireless communications. For instance, Jalali et al. (USP 6694469), discloses a method and apparatus for quick retransmission of signals in a communications system wherein a quality metric is used to detect if the transmitted packet is good or bad. Yun et al. (USPAP 2002/0176362 A1), discloses a method for retransmitting data on a reverse link for mobile communication wherein transmission energy is adjusted when data is retransmitted.

However, the prior art made of record, taken alone or in combination fails to teach or fairly suggest or render obvious the novel element of the instant invention. Specifically the prior art made of record, fails to teach or fairly suggest or render obvious the steps of "allowing absence of acknowledgement (ACK signals on an acknowledgement

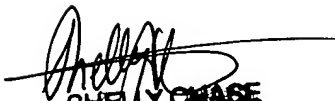

channel of a best base station to indicate that quality of the received data frame is good... encoding the ACK signals and the NAK signals, and transmitting the encoded signals on the acknowledgement channels during a switching period..
